

Instructions for operating the webcam:

PLEASE NOTE: The webcam will only work if you are using a desktop/laptop PC or an Apple Mac as the page does not resize for mobile devices.

Click the centre of this icon  to gain control of the camera.

Choose a preset camera view from the preset list below the main camera view.

OR

Manually move the camera by clicking and dragging this icon  around the small camera view box below the main view.

If using the camera at night, turn on the backlight using this button.

To pause the live video feed, click the pause button at the top of the camera control panel.

If the main camera view is displaying this screen  press this button  at the

top of the camera control box to attempt to reconnect the camera. If this doesn't work, try refreshing your browser page.

To change the resolution of the camera, use the drop down menu located to the right of this

icon. 

If you change the video display size to 640x480, please press F5 to refresh the page and get back to the full view of the camera.
